 paschalelechi0@gmail.com |  [Portfolio](#) |  [LinkedIn](#) | [GitHub](#)

Professional Summary

Backend & DevOps Engineer specializing in scalable backend systems, distributed APIs, and cloud-native infrastructure using Go (Golang) and Node.js. Experienced building production-grade REST, gRPC, and GraphQL services, containerized deployments, CI/CD pipelines, and scalable backend architectures. Strong background in system optimization, API infrastructure, real-time systems, and developer tooling. Passionate about building reliable, high-performance systems and solving complex engineering challenges in fast-paced startup environments.

Technical Skills

- **Backend Engineering:** Go (Golang), [Node.js](#), [Express.js](#), Gin (Go), REST APIs, gRPC
- **DevOps & Cloud:** Docker, Kubernetes, Terraform, GitHub Actions, CI/CD Pipelines, nginx
- **Databases & Caching:** PostgreSQL, MySQL, Redis, MongoDB
- **Security & Authentication:** JWT Authentication, API Key Authentication, RBAC, 2FA Implementation, Keycloak SSO
- **Frontend & Supporting Tools:** React, React Native, TypeScript, Git, Sequelize, GORM

Professional Experience

Rojifi Technology INC – Toronto, Canada

Backend Developer | Dec 2025 - Present

- Contributed to the development and optimization of the company's landing page using React.js, improving responsiveness and user experience.
- Developed and maintained core application features using React.js and Docker, ensuring scalable and containerized deployment workflows.
- Designed and built the Admin Dashboard using React.js, delivering a responsive and efficient interface for system management and operations.
- Engineered and maintained backend services using Golang, Node.js, Express.js, Redis, MongoDB, and PostgreSQL to support scalable and high-performance application architecture.

- Built Version 1 of the Rojifi Infrastructure, enabling users to become API service providers and consume public APIs. The infrastructure was developed using Golang, Gin, and gRPC for high-speed communication and scalability.
- Led the migration of the core application backend from Node.js to Golang to improve system performance, concurrency handling, scalability, and response speed.

Igbinedion University (NACOS)– Edo, Nigeria

Deputy Director of Technology & innovations | **Nov 2025 - Present**

- Lab Configuration: Prepared the software lab for student use by installing industry-standard tools (Vscode, pycharm, figma) and setting up virtual environments for cybersecurity practicals.
- Resource Sharing: Built an offline library of coding courses (web development, python, Ethical Hacking) on all systems, ensuring students had free access to quality learning materials
- Held a Tech Awareness event for year 1 to year 3 students that were interested in tech and also included a mini hackathon where there were asked to debug a minimal chat app i built using Html, css and Js
- Held a Github and LinkedIn optimization program to help students clean up and improve their profiles to attract recruiters

Neo Cloud Technologies – Abuja, Nigeria

Backend & DevOps Developer Intern | **Apr 2025 – Sep 2025**

- Built an **SMS-Mail System** with Go, gRPC, and React TypeScript, increasing multi-email & SMS delivery efficiency by **40%**.
- Developed a **CBT Platform and Exam management system** (React + Node.js), optimizing upload speeds by **10%**.
- Reverse-engineered a **Laravel-based LMS**, optimized database queries (+15% faster), and containerized with Docker for deployment.
- Performed **on-premises deployments** of Laravel systems, improving reliability under limited infrastructure.

Freelance & Full-Stack Developer

Full-Stack Developer | **May 2024 – Mar 2025**

- Built a real-time chat application using Laravel, Livewire, Redis, and MySQL with real-time messaging capabilities.
- Developed a restaurant booking platform using React, Node.js, Express, and PostgreSQL.
- Implemented RBAC, JWT authentication, and 2FA security systems to improve application security.
- Worked directly with clients to design scalable backend systems and deploy production-ready applications.

Selected Projects

ROJIFI APPLICATIONS | *Go, React (TS), REST API, GRPC*

- Engineered and maintained backend services using Golang, Node.js, Express.js, Redis, MongoDB, and PostgreSQL to support scalable and high-performance application architecture.
- Built Version 1 of the Rojifi Infrastructure, enabling users to become API service providers and consume public APIs. The infrastructure was developed using Golang, Gin, and gRPC for high-speed communication and scalability.
- Led the migration of the core application backend from Node.js to Golang to improve system performance, concurrency handling, scalability, and response speed.

Shopify Storefront SDK (Node.js + TypeScript) | *Typescript, Node.js, open source, npm, git*

- Engineered a high-performance, zero-dependency Node.js SDK for the Shopify Storefront API, successfully reducing boilerplate code for headless commerce by 40%.
- Streamlined developer workflow by implementing pre-built operations for complex logic such as Cart management, Customer authentication, and Blog/Article retrieval.
- Implemented support for both `import` and `require` syntax, ensuring legacy and modern Node.js applications can utilize the tool
- Integrated automated code generation to map Shopify's dynamic GraphQL schema directly to TypeScript interfaces, providing a superior autocomplete experience
- Advocated for best practices in headless commerce by enabling custom GraphQL query support alongside built-in core operations for maximum flexibility.
- Github repo: https://github.com/kiddo9/shopify_storefront_sdk, npm: shopify_storefront_sdk

CBT Platform and Exam management system | *React, Node.js, MySQL, Docker, GitHub Actions*

- Implemented reCAPTCHA v3, JWT auth, and 2FA, increasing security by 20%.
- Developed RBAC middleware to ensure proper authorization.
- Added question review workflows to improve exam content accuracy.

SMS-Mail System | *Go, gRPC, React (TS), Envoy, Docker, GitHub Actions*

- Enabled admins to send bulk SMS and emails simultaneously, cutting manual effort by 20%.
- Integrated API key authentication, 2FA, and reCAPTCHA, enhancing system security by 30%.
- Implemented Excel batch upload feature for seamless bulk messaging.

(More projects available on [GitHub](#) or [Portfolio](#))

Education

Igbinedion University Okada, Edo State, Nigeria | September 2022 - Expected: October 2026
B.Sc. Computer Science (GPA: 4.93/5.0)

- Relevant Coursework: Software Engineering Principles, Data Structures and Algorithms (C++), System Design
- Artificial Intelligence (Python), Web Development (JavaScript).

Certifications

- Cisco **IT Essentials**
- Cisco **IoT Fundamentals**
- PHP Certificate - *SoloLearn*
- Computer Networking - Huawei
- Software Development Certificate - *Neo Cloud Technologies*
- B.Sc. Computer Science

Areas of Interest

- Backend Engineering
- Distributed Systems
- Cloud Infrastructure
- Platform Engineering
- Developer Tooling
- DevOps Automation

Languages

- **English** – Native Proficiency
